Experience

Senior Data Scientist

July 2022 - Present

Nevada National Security Site

- Acted as the lead investigator for a data engineering project involving the organization and feature extraction of a dataset consisting of 12 years of data from the Los Alamos National Lab linear accelerator
- Trained a predictive model consisting of LSTM and dense layers using Keras to forecast future performance of an X-ray machine with accuracy of %90, resulting in improved maintenance planning and operational efficiency
- Developed interactive dashboards using Streamlit and Panel to visually present complex data and provide actionable insights to fellow scientists and stakeholders
- Applied Scikit-learn and Scikit-image to characterize the spot of an X-ray machine, thus estimating the blur kernel for deblurring X-ray images
- Built and managed a MySQL database of seismic sensor data
- Acted as lead maintainer of a company-wide internal seismic data-processing Python library hosted on our internal GitLab
- Utilized Neovim, Tmux, Vim-Slime and SSH to run code on our internal Linux cloud server

Graduate Teaching Assistant

Janurary 2016 - June 2022

Auburn University and University of Nevada Las Vegas

- Instructed courses in College Algebra and Pre-Calculus
- Led weekly recitation sections for Mathematical Statistics, Real Analysis and Calculus I, II and III
- Managed Auburn University's Math tutoring center of 14 tutors

Technical Skills

Programming Languages: Python, SQL, R, Lua, L^AT_EX

Libraries: scikit-learn, tensorflow, keras, pytorch, scipy, plotly, panel, pandas, pyarrow, sqlalchemy

Developer Tools: Git, Unix/Linux, Neovim, Tmux, SSH

Publications

- 1: Eisenberg, N., Chen, L. Interpolating the stochastic heat and wave equations with time-independent noise: solvability and exact asymptotics. Stoch PDE: Anal Comp (2022). <https://doi.org/10.1007/s40072-022-00258-6>
- 2: Eisenberg, N., Chen, L. Invariant measures for the stochastic heat equation on $\mathbb{R}^d$ without drift term. Submitted January 2023 to Journal of Theoretical Probability. Preprint available at <https://arxiv.org/pdf/2209.04771v1.pdf>

Education

Auburn University, Ph.D.

June 2022

Research Area: Probability (Stochastic Processes and Partial Differential Equations)

Advisor: Le Chen

University of Nevada Las Vegas, B.S./M.S.

December 2015 / January 2018

Major: Applied Mathematics
