

- Corsair
 1. Organized the 12 TiB dataset with the json pointer system
 2. configured the AWS instance
 3. trained models by linking GPUs with DataParallel.
 4. developed a yolo based model
- Cygnus
 1. LSTM variation autoencoder anomaly detection in pytorch
 2. organized the data sets
 3. used streamlit to deliver the model to non-technical staff
- TorchFace
 1. developed inhouse framework for training, validating and evaluation models
- shwrap
 1. python and bash integration
 2. main use was for data transfer to and from aws
 3. speed up from paramiko
- Timing SDRD
 1. sole developer of a djano web interface
 2. wrapper for neo4j
 3. allow for non-technical staff to interact with the neo4j database
