Department of Energy,

To whom it may concern,

As a PhD student specializing in probability and stochastic calculus, I have developed excellent problem solving skills and the ability to research applied mathematical problems that have yet to be solved. With my extensive knowledge of applied math and my ability to stay up-to-date with current research, I am confident that I would be a valuable Statistician at the Department of Energy.

I am currently finishing my PhD at Auburn University where I am researching stochastic partial differential equations under the supervision of [Dr. Le Chen](#). I have published a paper in *Stochastics and Partial Differential Equations: Analysis and computations* and I have another paper which I am now formatting in preparation to submit. I am currently using Python to generate simulations to various stochastic processes and I have recently started learning deep learning through Francois Chollet's Deep Learning with Python text.

I am really excited for the opportunity to work at the Department of Energy. I am a great team player and a very fast learner. I know that if given the opportunity, I would make a great fit into the team.

Best Regards,
Nick Eisenberg
