Caesar's Entertainment

To whom it may concern,

I am writing to express my interest about the data science opening posted on LinkedIn. As a PhD student specializing in probability and stochastic calculus, I have developed excellent problem solving skills as well as the ability to collaborate with others to research applied mathematical problems that have yet to be solved. I am self-motivated and I have a great passion for learning, and because of this, I am very confident that I would be a valuable member to the team of data scientists at Caesars.

As a researcher, I am constantly trying to find new innovative ways to solve problems that have yet to be completed and I have been successful in doing so by publishing in the journal *Stochastic and Partial Differential Equations: Analysis and Computations*. In addition, I have also presented my work at several academic conferences and seminars which has helped me develop the ability to explain highly technical problems in a clear and concise way to others. Because of these experiences, I understand the importance of communication and contribution. Lastly, I am proficient with the Python packages NumPy, math, pandas and matplotlib.pyplot which I have used throughout my time as a PhD student.

I am very excited for the opportunity to work as a data scientist at Caesars. I am confident that my expertise and academic training would make me a valued and dedicated member of the team.

Best Regards,
Nick Eisenberg
