Experience

Senior Scientist - Machine Learning

June 2022 - Present

Nevada National Security Site

- Developed a YOLO-based object-detection model in PyTorch that achieved a 80% mAP evaluation on a in-house thermal-image vehicle dataset.
- Designed an anomaly-detection model in PyTorch using an LSTM variational-autoencoder to detect component failure in a pulse-power x-ray machine. The model accurately predicted the location of a component failure with 87% accuracy and cut machine repair times by 50%.
- Applied the U-Net architecture with PyTorch to develop a deblurring model for a pulse-powered x-ray machine. The model was applied by the machine operators and reduced machine configuration time by 30%.
- talk about torchface
- talk about hpc. llnl and aws.
- Sole developer of a Django web interface, which wrapped Neo4j. The interface gave non-technical staff the ability to query and update the company's Neo4j graph-database without needing to know any query syntax.

Technical Skills

Programming Languages: Python, SQL, Bash, Cypher, Lua, $\text{\LaTeX}$

Libraries: PyTorch, Scikit-Learn, Pandas, Scipy, Sqlalchemy, Matplotlib, Plotly, Streamlit, Django

Developer Tools: Git, AWS, Unix/Linux, Slurm, Vim, Tmux, Neo4j

Education

Auburn University - Ph.D.

June 2022

Research Area: Probability (Stochastic Processes and Partial Differential Equations)

Advisor: Le Chen

University of Nevada, Las Vegas - B.S./M.S.

December 2015 / January 2018

Major: Applied Mathematics
