Global Indemnity

To whom it may concern,

I am writing to express my interest about the Actuarial Analyst I opening posted on LinkedIn. As a PhD student specializing in probability, I have developed excellent problem solving skills as well as the ability to collaborate with others to complete highly complex projects. I am self-motivated and I have a great passion for learning, and because of this, I am very confident that I would be a valuable member to the team of Actuaries at GBLI.

As of now, I have passed three actuarial exams: P, FM, and MFE. In addition to the exams, I also have experience with modeling stochastic processes with Python as well as using Python to handle larger data sets. For example, as an instructor I would use Python to pull grades from my students on-line homework. The students completed homework on a third party website which would create a large csv file of all the grades, however, with many useless columns. To avoid tediously going through and copying and pasting only the columns I needed, I would use Python to do this for me. I would also use Excel to calculate class statistics. I am well familiar with IF statements, conditional formatting, array formulas, etc.

I am very excited for the opportunity to work as an Actuary at GBLI. I love collaborating with others and I am an extremely fast and eager learner. I am confident that my expertise and academic training would make me a valued and dedicated member of the team.

Best Regards,
Nick Eisenberg
