Renaissance Technologies

To whom it may concern,

I am writing to express my interest about the Research Scientist position. As a PhD student specializing in probability and stochastic analysis, I have developed excellent problem solving skills as well as the ability to collaborate with others to research applied mathematical problems that have yet to be solved. I am self-motivated and I have a great passion for learning, and because of this, I am very confident that I would be a valuable member to the team of researchers at Renaissance Technologies.

As a researcher, I am constantly trying to innovative new ways to solve problems that have yet to be completed and I have been successful in doing so by publishing in the journal *Stochastic and Partial Differential Equations: Analysis and Computations*. In addition, I have also presented my work at several academic conferences and seminars which has helped me develop the ability to explain highly technical problems in a clear and concise way to others. Because of these experiences, I understand the importance of communication and contribution.

In addition to theoretical research, I have a lot of experience with applied topics as well. I have an advanced knowledge of mathematical statistics, calculus and probability. I also have experience with modeling stochastic processes with Python. For example, here is an [animation](#), along with the [script](#), which illustrates how "noise" affects the heat equation.

I am very excited for the opportunity to work at Renaissance Technologies. I love collaborating with others and I am an extremely fast and eager learner. I am confident that my expertise and academic training would make me a valued and dedicated member of the team.

Best Regards,
Nick Eisenberg
